B&C OFFICIAL MEASURER

INSTRUCTIONS FOR MEASURING MOOSE

Measurements must be made with a 1/4-inch wide flexible steel tape to the nearest one-eighth of an inch. Enter fractional figures in eighths, without reduction. Official measurements cannot be taken until antlers have air dried for at least 60 days after animal was killed.

- A. Greatest Spread** is measured between perpendiculars in a straight line at a right angle to the center line of the skull.
- B. Number of Abnormal Points on Both Antlers:** Abnormal points are those projections originating from normal points or from the upper or lower palm surface, or from the inner edge of palm (see illustration). Abnormal points must be at least one inch long, with length exceeding width at one inch or more of length.
- C. Number of Normal Points:** Normal points originate from the outer edge of palm. To be counted a point, a projection must be at least one inch long, with the length exceeding width at one inch or more of length. Be sure to verify whether or not each projection qualifies as a point.
- D. Width of Palm** is taken in contact with the under surface of palm, at a right angle to the inner edge of palm. The line of measurement should begin and end at the midpoint of the palm edge, which gives credit for the desirable character of palm thickness.
- E. Length of Palm** including Brow Palm is taken in contact with the surface along the underside of the palm, **parallel** to the inner edge, from dips between points at the top to dips between points (if present) at the bottom. If a bay is present, measure across the open bay if the proper line of measurement, **parallel to inner edge**, follows this path. The line of measurement should begin and end at the midpoint of the palm edge, which gives credit for the desirable character of palm thickness.
- F. Circumference of Beam at Smallest Place** is taken as illustrated.

ENTRY AFFIDAVIT FOR ALL HUNTER-TAKEN TROPHIES

For the purpose of entry into the Boone and Crockett Club's® records, North American big game harvested by the use of the following methods or under the following conditions are ineligible:

- I. Spotting or herding game from the air, followed by landing in its vicinity for the purpose of pursuit and shooting;
- II. Herding or chasing with the aid of any motorized equipment;
- III. Use of electronic communication devices, artificial lighting, or electronic light intensifying devices;
- IV. Confined by artificial barriers, including escape-proof fenced enclosures;
- V. Transplanted for the purpose of commercial shooting;
- VI. By the use of traps or pharmaceuticals;
- VII. While swimming, helpless in deep snow, or helpless in any other natural or artificial medium;
- VIII. On another hunter's license;
- IX. Not in full compliance with the game laws or regulations of the federal government or of any state, province, territory, or tribal council on reservations or tribal lands;

I certify that the trophy scored on this chart was not taken in violation of the conditions listed above. In signing this statement, I understand that if the information provided on this entry is found to be misrepresented or fraudulent in any respect, it will not be accepted into the Awards Program and 1) all of my prior entries are subject to deletion from future editions of **Records of North American Big Game** 2) future entries may not be accepted.

FAIR CHASE, as defined by the Boone and Crockett Club®, is the ethical, sportsmanlike and lawful pursuit and taking of any free-ranging wild, native North American big game animal in a manner that does not give the hunter an improper advantage over such game animals.

The Boone and Crockett Club® may exclude the entry of any animal that it deems to have been taken in an unethical manner or under conditions deemed inappropriate by the Club.
